

A vertical photograph on the left side of the page shows a large industrial facility. The most prominent feature is a tall, cylindrical red tank with several horizontal bands. To the right of the tank, there are various pipes, ladders, and structural elements of the plant. The sky is blue with some white clouds.

VACANCY: PROJECT ENGINEER

Our company

Econvert Water & Energy in Heerenveen, the Netherlands, focuses on the sustainable purification of industrial wastewater and biogas treatment. The company is specialized in anaerobic technology. A multi-project organization consisting of enthusiastic professionals who like to operate in teams. Operating internationally and always striving for improvement. Whether it is wastewater from the paper industry, a brewery or a potato processing plant company, Econvert Water & Energy comes up with the right solution for and with the customer. A growing and dynamic organization that gives you energy. In order to cope with the continuing growth we are looking for a driven:

Project Engineer

The tasks within the different projects are carried out according to the project management procedure. You want to use your mechanical engineering experience and qualities to contribute to more sustainable production cycles. From your previous positions it can be clearly seen that you have the experience and skills to overlook the technical/mechanical side of a project in which piping, instrumentation and tank construction are main items. You are capable of having in-depth technical discussions with customers and suppliers and you are able to convince people.

Your tasks:

- Lead engineer in wastewater treatment plant projects (focal point for technical issues)
- Responsible for the quality of designs (i.e. PID's, lay-outs, general arrangements) and to provide them in a timely manner
- Selection of equipment and instrumentation, prepare RFQ's
- Managing technical files and operation and maintenance manuals
- Assist the project manager in progress meetings with the customer

Your competences:

- Bachelor degree (or equal) in Mechanical Engineering
- Minimum 5 years of experience in an equal position in a similar industry
- Affinity with wastewater treatment
- Languages: English (obligatory) and Spanish or German
- Willing to travel
- Willing to move to the Netherlands

We offer:

- A competitive salary with appropriate secondary conditions
- A pleasant work environment within an enthusiastic team of professionals
- An open and respectful corporate culture
- Possibilities to develop yourself
