

FACTSHEET

Econvert-Pilot

Econvert's wastewater pilot plant is specially designed to treat a small part of the wastewater from the production process(es). Hence, the pilot reactor is able to demonstrate and test the exact process conditions for a full scale installation.

Functionality

- The wastewater can be directly fed (if it is free from dissolved components) in the pilot plant
- pH correction in the continuous mixed buffer tank
- Designed with a double wall transparent plexi glass and contains an effluent-biomass-gas separator
- A gas flow meter measures the gas flow very precisely
- Nutrients are dosed automatically
- Available in a 10 ft container with a heater and ventilation inside
